Lightweight with optimum flow – the poly installation housing

MORE for everyone!

The poly installation housing is flat, but can accommodate all turbine types of a single system: BGA160, BGA215, BGA275!
This was previously only possible with our combi-housing.

Simple installation

The intelligent design and the high-quality poly-propylene plastic ensure that the poly installation housing is 60 per cent lighter than a stainless steel one. This makes it even quicker to install.

Flow-optimised design

Both the installation housing and the cover grille of our poly installation housing are designed to optimise the flow.

Corrosion resistant

Thanks to the absence of metal, our poly installation housing is significantly less sensitive to low pH values or the overdosing of salt.

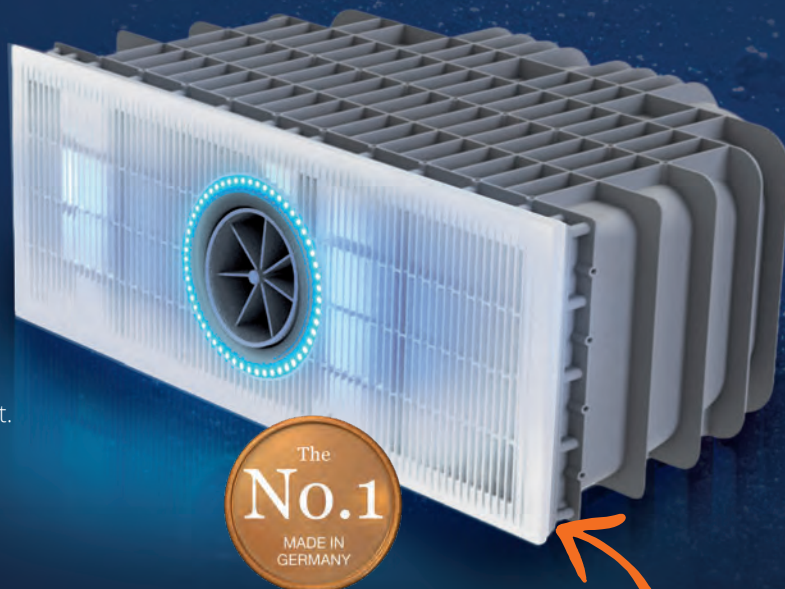

Stainless steel

Like all our installation housings for wall installation, we also equip the poly installation housing with a cover grille made of high-quality plastic to protect swimmers. For lovers of the classic look, the grille is also available in a stainless steel version.

Click-to-fit cover grille

The cover grille is injection-moulded from high-quality plastic and can simply be clicked into place and removed again easily from the installation housing.
