HydroStar®  
Die Turbinenschwimmanlage

## Impressive interplay of colours with the unique **illuminated optical control panel**

### Everything in view – with **BOB**

Our optical control panel combines great design with visual recognition of the set current level. Information such as the flow rate of the turbine is colour-coded.

#### Simple

Our **BOB control panel** enables the system to be operated directly from the pool. The LED display reflects the set current rate. It has never been so enjoyable (or easy).

#### Safe

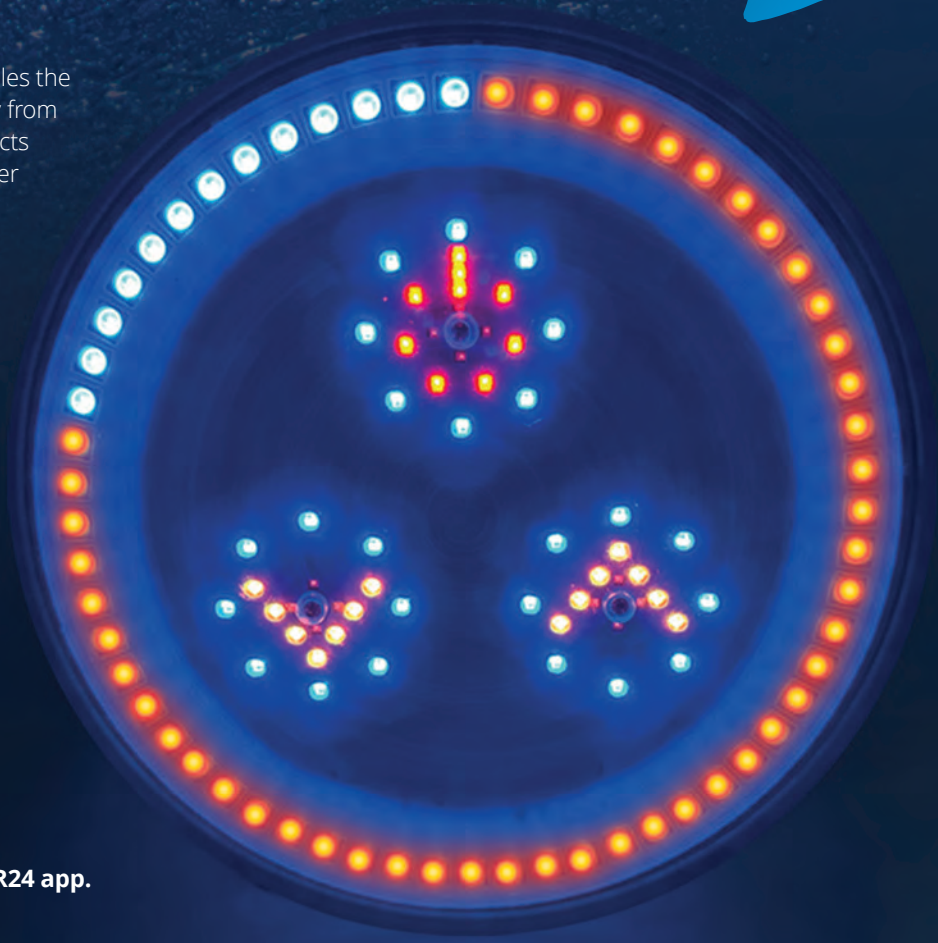

The buttons can be locked using the push-button or the **BINDER24 app**. This means that neither the cleaning robot nor your children can accidentally switch on the counter-current system.

#### Dynamic

All optical settings are directly synchronised with the **BINDER24 app**.

#### Clever

The smooth flat surface of the touch screen is **particularly robust** and sits securely in the installation housing for wall installation without the need for any screws.

## Even MORE swimming fun with the **BINDER +System**

MORE of everything!

The BINDER +System brings even more fun to the pool. The system developed for the **HydroStar** turbine swimming system offers many additional features:

### + Energy efficient

Our turbines have always been very **energy-efficient**. With the +System, energy consumption has been yet again significantly reduced.

### + Simple operation

Thanks to the continuous development of our **BINDER24 app**, many operating programmes and exciting functions are available.

### + Expandable

With our **+System**, future innovations can be easily integrated. The +System is available for the BGA215, BGA275, BGA430 and BGA550.

### + Wi-Fi

Now you can connect **HydroStar** to your home network even more easily.

### + New lighting programmes

Thanks to the improved control system, you can now enjoy even more lighting effects with our **LED rings** or **ambient lighting**.
